

The Future of Red Hat Lightspeed

Roadmap, Agentic Management, On-Prem
Connectivity, and Operational Intelligence at Scale

Megan Meza

Rob Williams
Sr Manager, Product

What you'll walk away with

1.

Why Red Hat Lightspeed is critical in today's IT environment

2.

How I can integrate Red Hat Lightspeed into my existing tools and workflows.

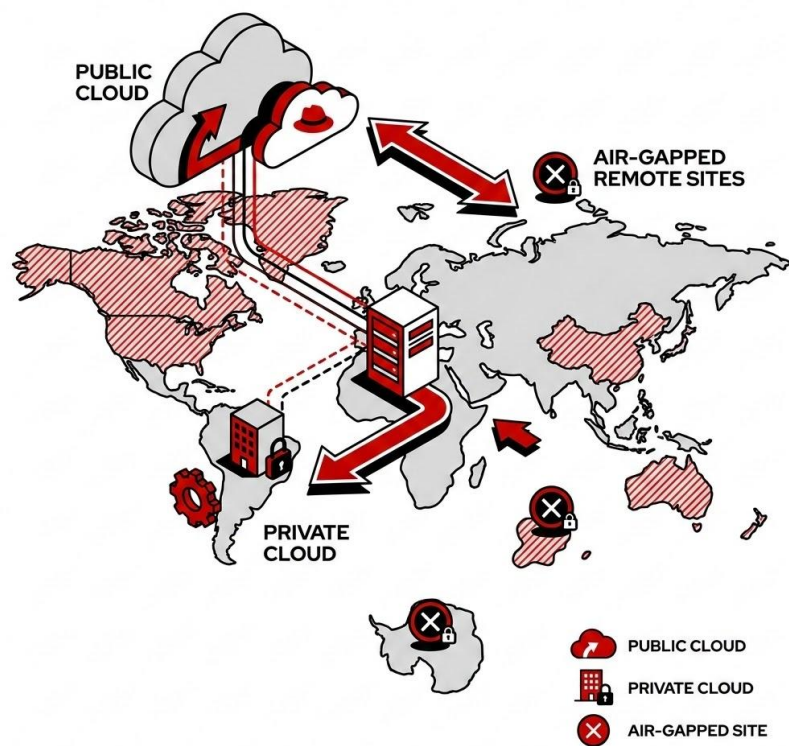

3.

An understanding of how Red Hat Lightspeed will evolve over the next year.

Red Hat Insights is now Red Hat Lightspeed

The Modern Operational Dilemma

Infrastructure complexity is outpacing human manual management.

The gap: Cloud-connected agility vs. on-prem/disconnected security.

Transitioning from "Alerting" to "Actionable Intelligence".

The Operational Intelligence Lifecycle

- ▶ **Identify** – Continuous scanning across RHEL, OpenShift, and Ansible footprints.
- ▶ **Prioritize** – AI-driven risk assessment tailored to your specific configuration and metadata.
- ▶ **Resolve** – Automated remediation via Ansible Playbooks or Red Hat Satellite.

Introducing Red Hat Lightspeed

Formerly Red Hat Insights

Keep systems consistent
and up to date.

Identify security and
performance risks.

Minimize
troubleshooting time.

Monitor and
manage costs.

This helps you decrease the complexity of system, security, and cost management across your entire enterprise—to help you **optimize your operations and allow you to focus on business-critical priorities.**

Capabilities of Red Hat Lightspeed include

Advisor

Recommendations for misconfigurations and best practices to improve stability, performance & availability

Patch

Tracks applicable Red Hat errata across environments including security, bug fixes and enhancement advisories

Vulnerability

Identifies, prioritizes and reports on known security Common Vulnerabilities and Exposures (CVEs)

Images

Simplifies image customization via the creation of blueprints and deployment across hybrid environments.

Cost Management

Provides visibility into usage and cost trends across hybrid cloud environments

Subscriptions

Delivers visibility into Red Hat subscription status, usage trends and utilization across your infrastructure

Compliance

Monitors compliance with security baselines to report on and meet regulatory requirements at scale

Malware Detection

Scans for known malware using a curated signature database developed with IBM X-Force

Recent Deliverables

Recent Deliverables

Image Builder

- MCP for Image Builder
- .iso and PXE boot targets
- Compliance monitoring
- Package recs for RHEL 9.6

AI/ML Capabilities

- Advisor recommendations for RHEL AI
- Insights recommendations generator
- Incident detection for OpenShift
- RH Lightspeed Agent for Google Cloud

Integrations

- Crowdstrike Malware Signatures
- EDA, ServiceNow, Splunk
- MCP - Dev Preview
- API Cheatsheet

Remediations

- Streamlined onboarding
- Dependency checks
- Performance optimization & limits
- UX redesigned for usability

Advisor

- Ext4 bugs, CIFS deadlock
- NFS V3 perf, Intel ICE panics
- Systemd boot failures

User Access

- New streamlined RHEL service roles
 - RHEL administrator
 - RHEL operator
 - RHEL viewer
- Workspaces

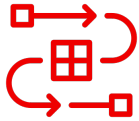

Key Roadmap Themes

Red Hat Lightspeed Roadmap

Four Key Themes for 2026+

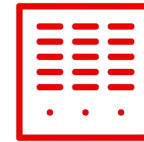

Agentic Management

Analytics meet you inside your favorite chat assistant, using your preferred models.

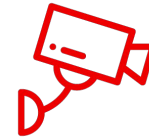

Augmented Context

AI gives users in-app context about a recommendation, limiting time needed for investigation

On Premise Management

Analytics and security tools are embedded inside your on premise management tools, without data transfer to Red Hat

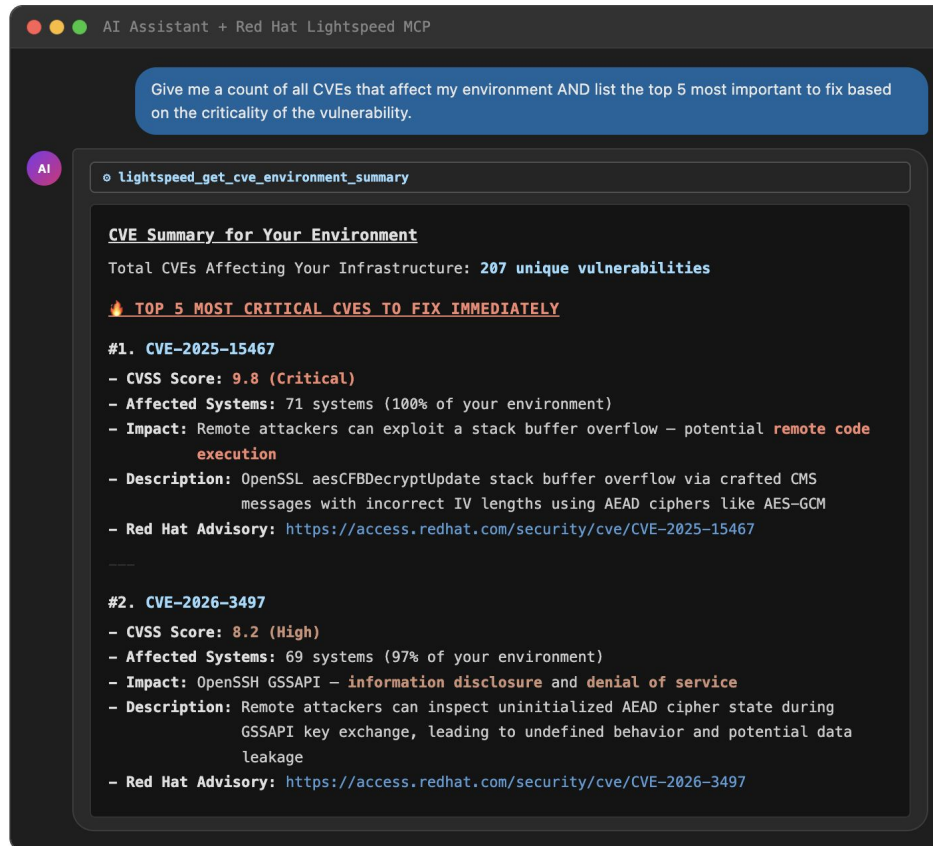

Enhanced Security

Red Hat continues to invest in the ongoing security of our products, readying them for PQC and certifications.

Agentic Management

Moving Toward Autonomous Systems

AI Assistant + Red Hat Lightspeed MCP

Give me a count of all CVEs that affect my environment AND list the top 5 most important to fix based on the criticality of the vulnerability.

lightspeed_get_cve_environment_summary

CVE Summary for Your Environment

Total CVEs Affecting Your Infrastructure: **207 unique vulnerabilities**

🔥 TOP 5 MOST CRITICAL CVEs TO FIX IMMEDIATELY

#1. CVE-2025-15467

- CVSS Score: **9.8 (Critical)**
- Affected Systems: 71 systems (100% of your environment)
- Impact: Remote attackers can exploit a stack buffer overflow – potential **remote code execution**
- Description: OpenSSL aesCFBDecryptUpdate stack buffer overflow via crafted CMS messages with incorrect IV lengths using AEAD ciphers like AES-GCM
- Red Hat Advisory: <https://access.redhat.com/security/cve/CVE-2025-15467>

#2. CVE-2026-3497

- CVSS Score: **8.2 (High)**
- Affected Systems: 69 systems (97% of your environment)
- Impact: OpenSSH GSSAPI – **information disclosure** and **denial of service**
- Description: Remote attackers can inspect uninitialized AEAD cipher state during GSSAPI key exchange, leading to undefined behavior and potential data leakage
- Red Hat Advisory: <https://access.redhat.com/security/cve/CVE-2026-3497>

Red Hat Lightspeed hosted and on premise data will be accessible through MCP servers.

Agent skills will remove complexity and streamline token usage.

Red Hat will consistently test and recommend models for best experience.

Augmented Context

From Findings to Understanding

Red Hat Lightspeed will use generative AI to help users understand security related context for Malware found on connected hosts.

Matched

Description
Detects suspicious embedded file types in OneNote files. Detects suspicious embedded file types in OneNote files.

Matched systems	Last matched	Author
⚠ 3	01 Sept 2025	Florian Roth

AI Summary

Your malware scanner flagged a shell script on your system (/root/finspy.sh) that matches known patterns used by FinSpy, a commercial spyware tool used to monitor and steal data from targeted systems. The match came from a YARA rule looking for suspicious keywords like fin_conn, which often appear in unpacked versions of this malware.

On Premise Management

Secure Analytics in Restricted Environments

Increased analytic and security features will be accessible within your firewall.

MCP access to Red Hat Lightspeed will work seamlessly alongside your Satellite and RHEL MCPs

Security standards like PQC will be implemented and ready for the most conservative use cases.

Enhanced Security Inside and Out

 **IBM X-Force**
302 Available signatures

 **CrowdStrike**
2420 Available signatures

Description

Macro Dropper Document used by CARBON SPIDER and Buhtrap

Red Hat remains enterprise ready with ISO 42001 Artificial Intelligence Management System (AIMS) Certification

Post-Quantum Cryptography (PQC) enablement for hosted and on premise solutions becomes the new standard for security excellence.

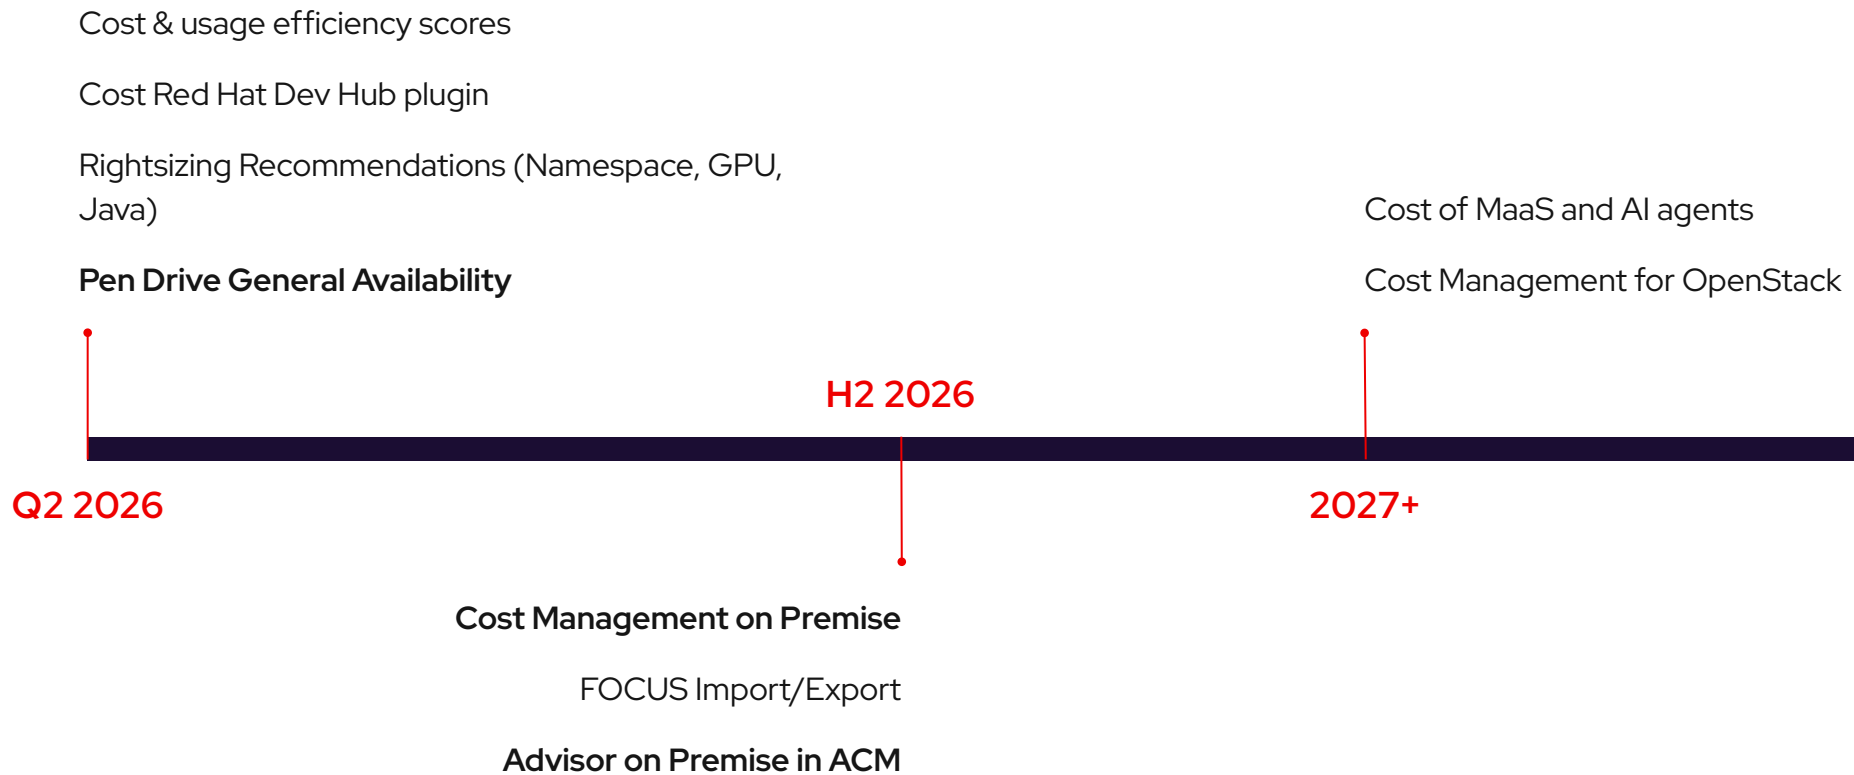

Expanded partnerships allow joint customer to maximise their coverage and minimize their false positives.

Roadmap Details

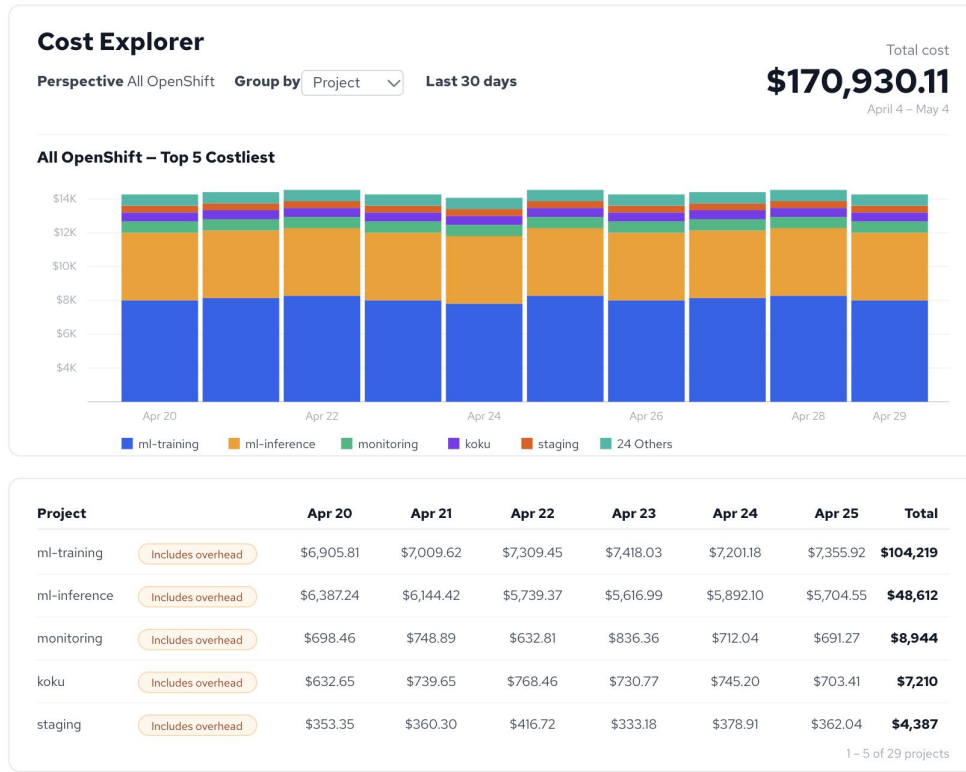

Red Hat Lightspeed Roadmap - OpenShift

On-Prem Cost Management for OpenShift

Resource Optimization Without Data Leaving Your Site

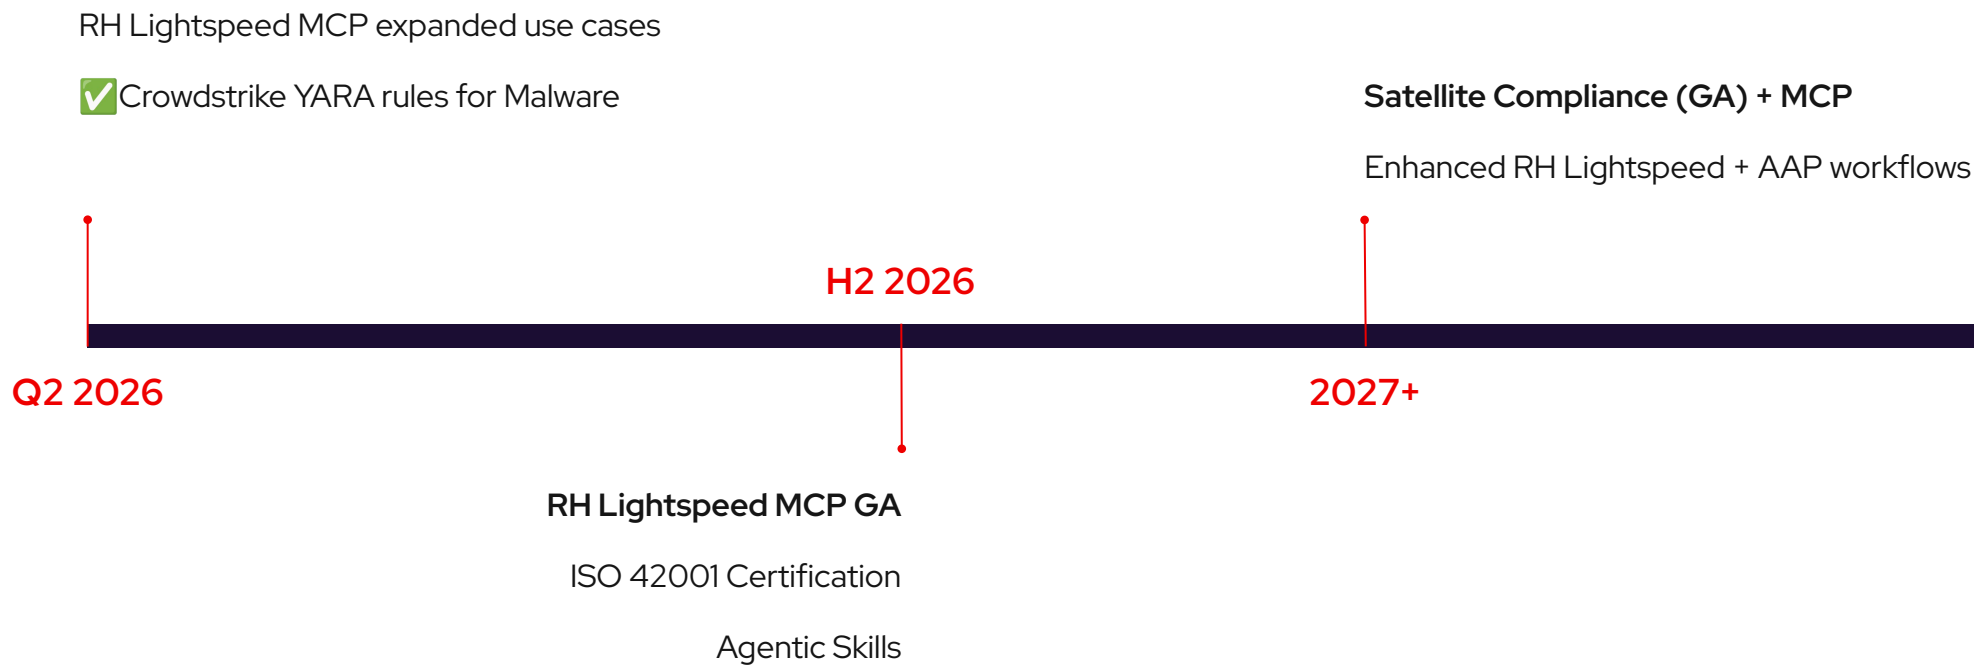

Capabilities:

- Cost & Usage Efficiency Scores
- Rightsizing Recommendations (Namespace, GPU, Java)
- FOCUS Import/Export - FinOps standard compliance
- Cost per Service Unit - Chargeback and showback

Red Hat Lightspeed Roadmap - RHEL

MCP Server Enhancements

Secure Analytics in Restricted Environments

- ▶ Key Benefits:
 - GA level support for production environments
 - Compliance use cases
 - Planning use cases

- ▶ Timeline: GA 2H 2026

Red Hat Satellite Integration

Bringing Red Hat Lightspeed On-Premise

- ▶ Capabilities:
 - Advisor (GA Q2 2026) - On-premise recommendations
 - Vulnerability (GA Q2 2026) - CVE analysis
 - Compliance (GA 1H 2027) - Security compliance checks
 - MCP Integration (2H 2027) - Full offline capabilities

Key takeaways

1.

Red Hat Insights is now Red Hat Lightspeed and is critical to solving today's operational challenges.

2.

Red Hat Lightspeed is committed to "Meeting me where I am"

3.

Red Hat Lightspeed roadmap is expanding across RHEL and OpenShift

The Red Hat Lightspeed team wants to hear from *you!*

We're looking for Red Hat customers to share their feedback on future functionality and roadmap for Red Hat Lightspeed.
No sales pitches - just your feedback.

Customer Demo Series

- Provide input on features critical to your organization
- Have direct communication with Product Managers
- Open to direct customers & partners; ideally RHEL Admins, SecOps, and ITDM.

How it works:

- Meets virtually every 2 weeks for 3-4 months
- Receive SWAG

Scan the QR code or go to:
red.ht/userfeedback

User Research Panel

- Participate in interviews, usability tests and more
- Your feedback helps influence the future of Red Hat Products

How it works:

- Periodic emails inviting you to participate in research that meets your interests and expertise
- If accepted to a study, compensation for your time.

Thank you
